

1. Brainstorming & Ideation Phase

ComicCraft – AI Comic Story Creator Using Gemini Models

Identifying the concept, creative direction, and intended user experience

1. Project Idea

ComicCraft is a web-based application that transforms a user's story prompt into a personalized comic. It combines AI-generated story content with comic-style illustrations and provides an on-screen preview and PDF export.

2. Problem and Opportunity

Creating a comic typically requires a person to develop a story, write dialogue, and prepare illustrations. ComicCraft explores how generative AI can assist with these creative steps and make comic creation accessible to non-artists and casual users.

3. Core Idea

The user supplies a story prompt and preferences such as the main character's name, setting, tone, and art style. The application then generates a panel-by-panel outline, expands it into narration and dialogue, creates illustrations, and assembles the result for viewing and download.

4. Creative Inputs

The initial idea supports user-defined story prompts, character names, settings (for example, a forest, school, or city), tones (such as funny or dramatic), and art styles (such as anime, pixel art, comic book, or realistic).

5. Example Use Cases

A user may request a brave fox exploring an enchanted forest, with a dramatic tone and anime style. Another user may regenerate a comic using a funny tone and a comic-book art style. After reviewing the result, the user can export it as a PDF.

6. Proposed AI Roles

The guide identifies Gemini Flash for structured comic outlines, Gemini Pro for detailed narration and dialogue, and Stable Diffusion for comic-style illustrations. The models are used for different parts of the creative workflow.

7. Expected Output

The intended output is a sequential comic with panel titles, illustrations, scene descriptions, captions, narration, and dialogue, plus a downloadable PDF version.

8. Ideation Outcome

The ideation phase establishes the product concept and creative workflow: prompt input → outline → story → illustrations → comic preview → PDF export. This concept provides the foundation for requirements and design.
